

Tabell 4 oppsummerer tillit til resultatene om kompensasjonstiltak.

Tabell 4. Gradering av tilliten til kompensasjonstiltak

Utfall	N <sup>o</sup> of participants (studies) Follow-up	Quality of the evidence (GRADE)	Relative effect (95% CI)	Anticipated absolute effects	
				Risk with control	Risk difference with compensative treatment
Størrelse på synsfelt	110 (4 RCTs)	⊕○○○ VERY LOW <sup>a,b</sup>	-	-	SMD <b>0.21 SD lower</b> (0.71 lower to 0.29 higher)
Visuell søkefunksjon	201 (7 RCTs)	⊕⊕○○ LOW <sup>a,c</sup>	-	-	SMD <b>1.04 SD higher</b> (0.48 higher to 1.6 higher)
Leseferdighet	201 (7 RCTs)	⊕⊕○○ LOW <sup>a,d</sup>	-	-	SMD <b>0.91 SD higher</b> (0.49 higher to 1.33 higher)
Dagliglivets aktiviteter (ADL)	120 (4 RCTs)	⊕⊕○○ LOW <sup>a,e</sup>	-	-	SMD <b>0.69 SD higher</b> (0.17 higher to 1.21 higher)

\***The risk in the intervention group** (and its 95% confidence interval) is based on the assumed risk in the comparison group and the **relative effect** of the intervention (and its 95% CI).

**CI:** Confidence interval; **SMD:** Standardised mean difference

- a. Most items are of unclear or high risk of bias
- b. We graded down 2 levels for one small study with wide CI.
- c. Significant Tau-squared. I-squared: 68%.
- d. Asymmetric funnel plot with small studies having larger effects.
- e. Small number of participants and wide CI.
